Overview

Discuss options for source and doc hosting

Set up VSTS for our source

Build from VSTS to agent on my machine

Deploy to my own machine from VSTS

Set up CI/CD

Hosting Options

Source

GitHub

BitBucket

GitLab

VSTS / TFS

...

Doc Site

ReadTheDocs.org

ReadTheDocs.com

Favorite cloud

Locally on your network

...

Demo

Set up a remote build agent

Not necessary if you have hosted builds

Download agent software

Get Personal Access Token (PAT)

Extract agent software

Configure agent

Summary

This Module:

– Discuss hosting options, setup VSTS

Overall:

– Created doc project with sphinx and Read The Docs theme

– Learned ReStructured Text

– Setup hosting, Git workflow, and CI/CD with GitHub and Read The Docs

– CSS, Markdown, Versions

Doc yourself out! ☺
